

WEB PROGRAMMING · MINI PROJECT

WealthWise – Smart Budget Tracker

01 / THE PROBLEM

Why personal finance tracking needed a rethink

Scattered inputs
Income and expenses are often scattered across notes, apps or memory.

One view
Users need one view of balance, spending patterns and budget status.

WealthWise
WealthWise turns those everyday gaps into one organised dashboard.

02 / PRODUCT DESIGN

Designing the product around one personal wallet

PRIMARY USER

An individual

Tracking personal income and spending.

ONE WALLET · ONE FINANCIAL POSITION

CORE NAVIGATION

- Dashboard
- Transactions
- Monthly budget
- Savings goals

DESIGN PRINCIPLE

Clear at a glance

Make the financial position clear through cards, colour and hierarchy.

START WITH THE WALLET

03 / DASHBOARD

The dashboard turns raw entries into a financial snapshot

₹

TOTAL BALANCE

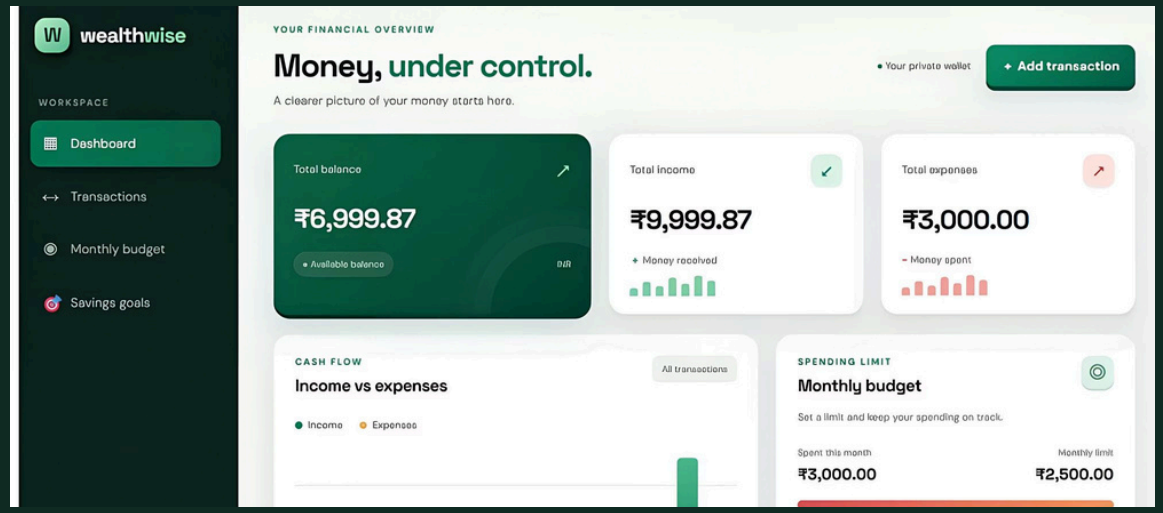

₹

TOTAL INCOME

₹

TOTAL EXPENSES

- Cash flow compares income and expenses month by month.
- Budget status shows spent amount, limit, percentage used and amount over budget.

04 / TRANSACTIONS

Transaction design keeps every money movement actionable

01

Add

Title, category, date, type and amount.

02

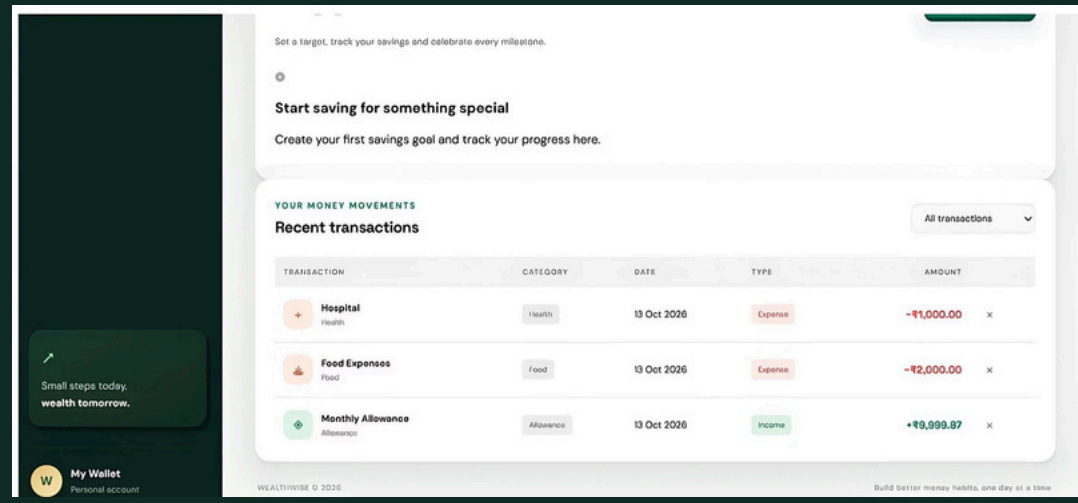

Read

Income uses a plus sign in green. Expenses use a minus sign in red.

03

Act

Filter or delete an entry. Every change recalculates totals and balance.

05 / FORWARD VIEW

Budget and savings make the dashboard forward-looking

MONTHLY BUDGET

Set a limit

Users set a monthly spending limit and see progress against it.

SPENT · LIMIT · PERCENTAGE USED

BUDGET STATUS

Surface the risk

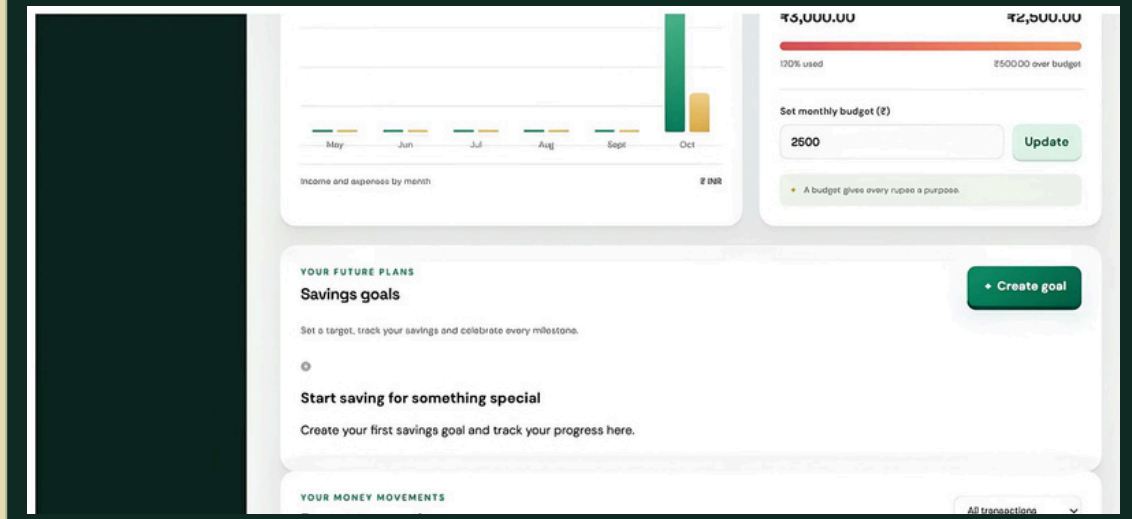

The interface surfaces over-budget status instead of hiding it.

AMOUNT OVER BUDGET REMAINS VISIBLE

SAVINGS GOALS

Track progress

Savings goals provide a place to set a target and track progress, even before the first goal is created.

06 / ARCHITECTURE

The architecture stays lightweight and browser-first

Presentation layer

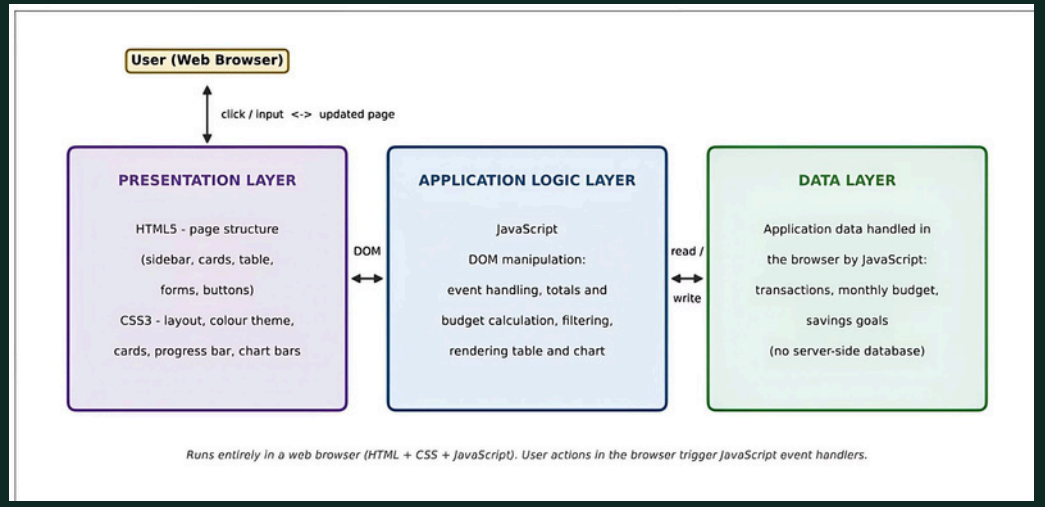

HTML5 and CSS3 structure the sidebar, cards, forms, table, chart and progress bar.

Application logic

JavaScript handles events, calculations, filtering and rendering.

Data layer

Transactions, budget and savings goals are handled in the browser without a server-side database.

07 / SYSTEM VIEW

One user drives six connected modules

Addingor deletingatransactionupdatestotals;monitoringthebudgetincludescalculating the percentage used.

Dashboard summary

Balance, income and expenses.

Transactions

Add, filter or delete entries.

Cash flow

Income and expenses by month.

Budget

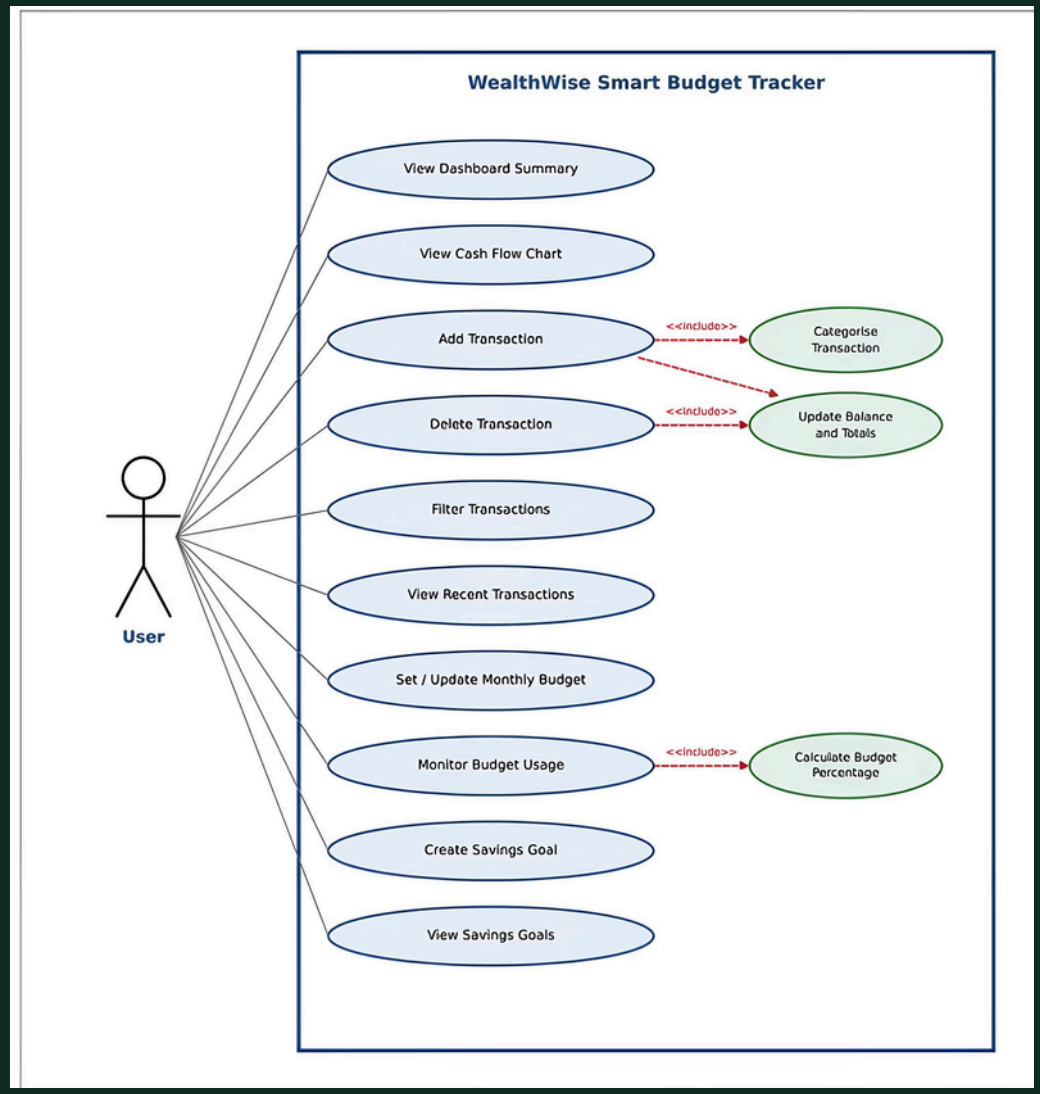

Calculate percentage used.

Savings goals

Set targets and track progress.

Navigation

Connect the experience.

The implementation separates structure, style and behaviour

HTML5
Structure

Definesthe dashboard structure and interactive elements.

CSS3
Style

Creates the dark-green and white card-based visual system, tags, progress bar and chart bars.

JAVASCRIPT + DOM
Behaviour

UsesDOMmanipulation to redraw cards, tables, charts and budget indicators after user actions.

09 / CONCLUSION

What the project proves

WealthWise makes balance,spending,budget and savings visible in one browser-based experience.

It demonstrates practical use of HTML, CSS, JavaScript and DOM manipulation.

NEXT IMPROVEMENTS

- Secure login and database storage
- Transaction editing and category reports
- Alerts and exports

LONGER HORIZON

Multiple wallets and a mobile app.

`FROM BROWSER-FIRST PROTOTYPE TO BROADER PRODUCT`
