INTERNAL EXAMINER **EXTERNAL EXAMINER**

ABSTRACT:

WealthWise – Smart Budget Tracker is a web-based application developed to help individuals manage their personal finances in a simple and organised way. Many people record their income and spending in scattered notes or remember them only roughly, which makes it difficult to know the available balance, to see where money is being spent, or to stay within a planned monthly limit. WealthWise addresses these problems by providing one centralised dashboard for income, expenses, available balance, monthly budget, savings goals and recent transactions.

The dashboard presents the total balance, total income and total expenses in Indian rupees (₹) and draws a month-wise income versus expenses chart for a visual picture of cash flow. The user can add transactions with a title, category, date and amount, view them in a categorised table of recent transactions, filter the list and delete an entry. A monthly budget section compares the amount spent this month with the limit set by the user, shows the percentage of the budget used, reports the amount by which the budget is exceeded and allows the limit to be updated. A savings goals section lets the user create goals and track progress towards them.

With its clean card-based interface, sidebar navigation and colour-coded amounts, WealthWise helps users build better money habits by making their financial position clear at a glance.

The system is built with HTML5 for the page structure, CSS3 for the visual design and JavaScript for the application logic. DOM manipulation is used to update the totals, chart, budget indicator and transaction table on the page. The application runs in a web browser and does not use a server-side database.

WEALTHWISE – SMART BUDGET TRACKER

1.1 INTRODUCTION

Managing personal money is a daily need for students and working people alike, yet the records are usually scattered. Income is noted in one place, expenses are remembered or written elsewhere, and there is rarely a single view that shows how much money is actually left, which category consumes the most, or whether the month's spending is within the planned limit.

WealthWise – Smart Budget Tracker solves this by giving the user one organised web page that works as a personal wallet. The user records income and expenses as transactions with a title, category, date and amount. From these transactions the dashboard shows the total balance, total income and total expenses in Indian rupees (₹), draws an income versus expenses chart for each month and compares the spending of the month with a budget limit chosen by the user. A savings goals section keeps future plans in view, and a recent transactions table lists every entry with its category, date, type and amount, with a filter and a delete option.

The application is built with HTML, CSS and JavaScript. HTML gives the structure of the page, CSS provides the green, card-based design, and JavaScript with DOM manipulation responds to the user's actions and updates the totals, the chart, the budget indicator and the transaction table directly in the page.

1.2 PURPOSE

The purpose of WealthWise is to provide one simple, visual place for tracking personal finances. It aims to:

- Replace scattered notes and rough memory with a single web page for recording income and expenses.
- Show the total balance, total income and total expenses clearly on the dashboard.
- Present income and expenses month by month as a visual cash flow chart.
- Let the user set a monthly budget and see how much of it has been used and by how much it is exceeded.
- Allow the user to create savings goals and keep future plans in view.
- Keep a categorised list of recent transactions that can be filtered and deleted.
- Encourage better money habits through a clear and uncluttered interface.

1.3 SCOPE OF THE PROJECT

The application serves an individual user who wants to track personal income and spending. Its scope covers:

- **Dashboard:** a financial overview with total balance, total income and total expenses, each shown in ₹ (INR).
- **Transactions:** adding a transaction with a title, category, date, type (income or expense) and amount; a recent transactions table with category, date, type and colour-coded amount.
- **Filtering and deleting:** an "All transactions" selector to filter the list and a delete (×) control on every row.
- **Cash flow chart:** income and expenses plotted month by month (May to October are shown).
- **Monthly budget:** amount spent this month against the monthly limit, percentage of the budget used, amount over budget, and a field to update the limit.

- **Savings goals:** a Create goal button and a section for tracking savings goals, with a helpful message when no goal has been created yet.
- **Navigation:** a sidebar with Dashboard, Transactions, Monthly budget and Savings goals, and a “My Wallet – Personal account” label.

Based on the implemented screens, the system does not currently include user login, a server-side database, bank account integration, e-mail or SMS alerts, or multiple currencies. These can be added in future versions.

1.4 SOFTWARE REQUIREMENTS OF THE PROJECT

Overall Description

WealthWise lets a user manage personal finances through a web browser. The page is built with HTML, styled with CSS and made interactive with JavaScript. The system gives the user a clear picture of the available balance, income, expenses, monthly budget and savings goals, and keeps the most recent transactions in one easy-to-read table.

Product Perspective

The system follows a layered client-side architecture, as shown in Fig 1.1:

- **Presentation layer:** HTML5 for the page structure (sidebar, cards, table, forms, buttons) and CSS3 for layout, colour theme, cards, progress bar and chart bars.
- **Application logic layer:** JavaScript with DOM manipulation, which handles user events, calculates totals and budget usage, filters transactions and renders the table and chart.
- **Data layer:** the application data (transactions, monthly budget and savings goals) handled in the browser by JavaScript. No server-side database is used.

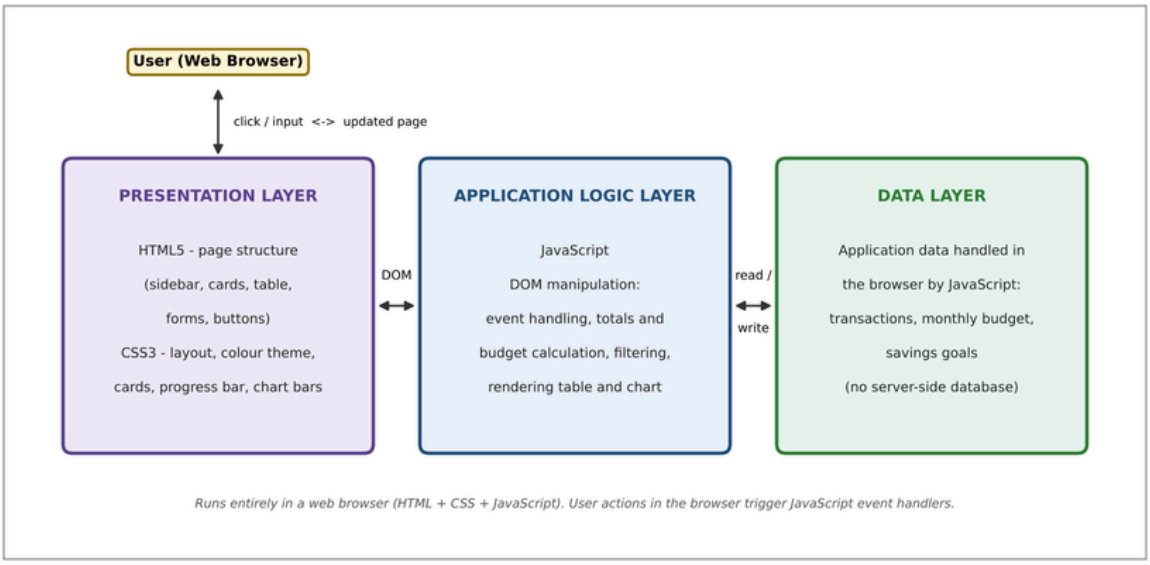

Fig 1.1 System architecture of WealthWise

Hardware Requirements

- Processor: Intel i3 or higher
- RAM: 4 GB or higher
- Hard Disk: 500 GB or higher
- OS: Windows 8, 10, 11 (or any operating system with a modern web browser)

Software Requirements

- Frontend: HTML5, CSS3, JavaScript (DOM manipulation)
- Backend and database: not required (client-side application)
- Browser: a modern web browser such as Google Chrome, Microsoft Edge or Mozilla Firefox
- Tools: a code editor such as Visual Studio Code

Product Functionality

a) **Dashboard Overview:** shows the total balance, total income and total expenses in ₹ with small visual indicators on each card.

b) **Add Transaction:** records a new income or expense with its title, category, date and amount from the Add transaction button.

c) **Recent Transactions:** lists transactions with a category tag, date, type tag and signed, colour-coded amount; supports filtering and deleting an entry.

d) **Cash Flow Chart:** compares income and expenses for each month with a legend and a ₹ INR label.

e) **Monthly Budget:** shows the amount spent this month, the monthly limit, a progress bar, the percentage used and the amount over budget; the limit can be changed with the Update button.

f) **Savings Goals:** creates savings goals with the Create goal button and shows an encouraging empty-state message until the first goal is added.

g) **Navigation:** a sidebar to move between Dashboard, Transactions, Monthly budget and Savings goals.

Assumptions and Dependencies

- The application is opened in a modern web browser with JavaScript enabled.
- All amounts are in Indian rupees (₹, INR).
- The application logic runs in the user's browser, so no server or database set-up is needed.

Functional Requirements

1. Dashboard Summary Module (DSM)

- The dashboard displays total balance, total income and total expenses with two decimal places in ₹.
- Total balance is the total income minus the total expenses and is updated when transactions change.

2. Transaction Module (TM)

- The user can add a transaction with a title, category, date, type and amount.
- Each transaction appears in the recent transactions table; income is shown with a plus sign in green and expenses with a minus sign in red.
- The list can be filtered with the “All transactions” selector and any row can be deleted with the × control.

3. Cash Flow Chart Module (CFM)

- Income and expenses are plotted as paired bars for each month, with a legend and month labels.

4. Monthly Budget Module (MBM)

- The user enters a monthly limit in ₹ and presses Update.
- The module shows the spent amount, the limit, the percentage used in a progress bar and the amount over budget.

5. Savings Goals Module (SGM)

- The user can start a new goal with the Create goal button.
- When no goal exists, a message invites the user to create the first goal.

6. Navigation and Interface Module (NIM)

- A sidebar provides navigation, and a header with an Add transaction button is available at the top of the dashboard.

Non-functional requirements

- **Usability:** a clean card-based layout with sidebar navigation and colour-coded amounts that are easy to read.
- **Accuracy:** totals, balance and budget percentage are calculated from the recorded transactions.
- **Performance:** a lightweight page that runs in the browser and updates quickly.
- **Portability:** runs in any modern web browser without installing additional software.
- **Maintainability:** structure (HTML), design (CSS) and behaviour (JavaScript) are kept separate.

2. SYSTEM FLOW DIAGRAMS

2.1 USE CASE DIAGRAMS

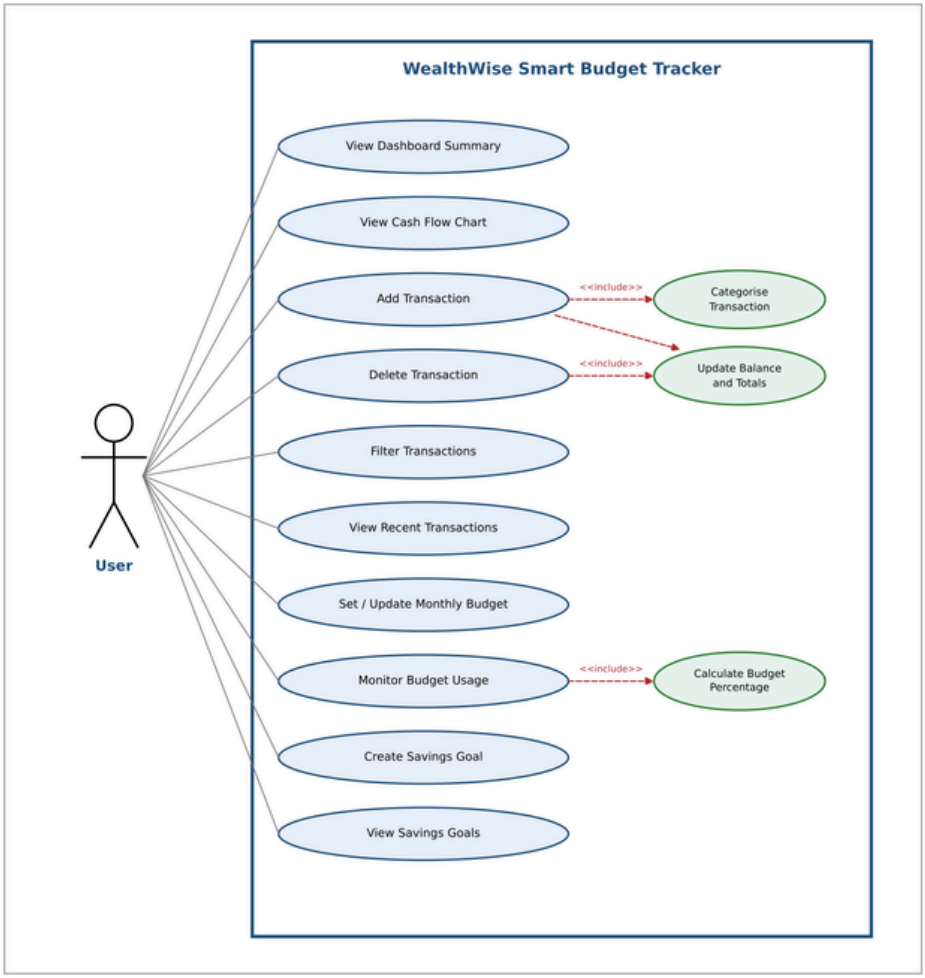

Fig 2.1 Use case diagram of WealthWise

The User is the only actor. Addinga transactionincludes categorisingitandupdating the balance and totals; deleting a transaction also updates them; monitoring the budget includes calculating the percentage used.

2.2 ENTITY RELATIONSHIP DIAGRAMS

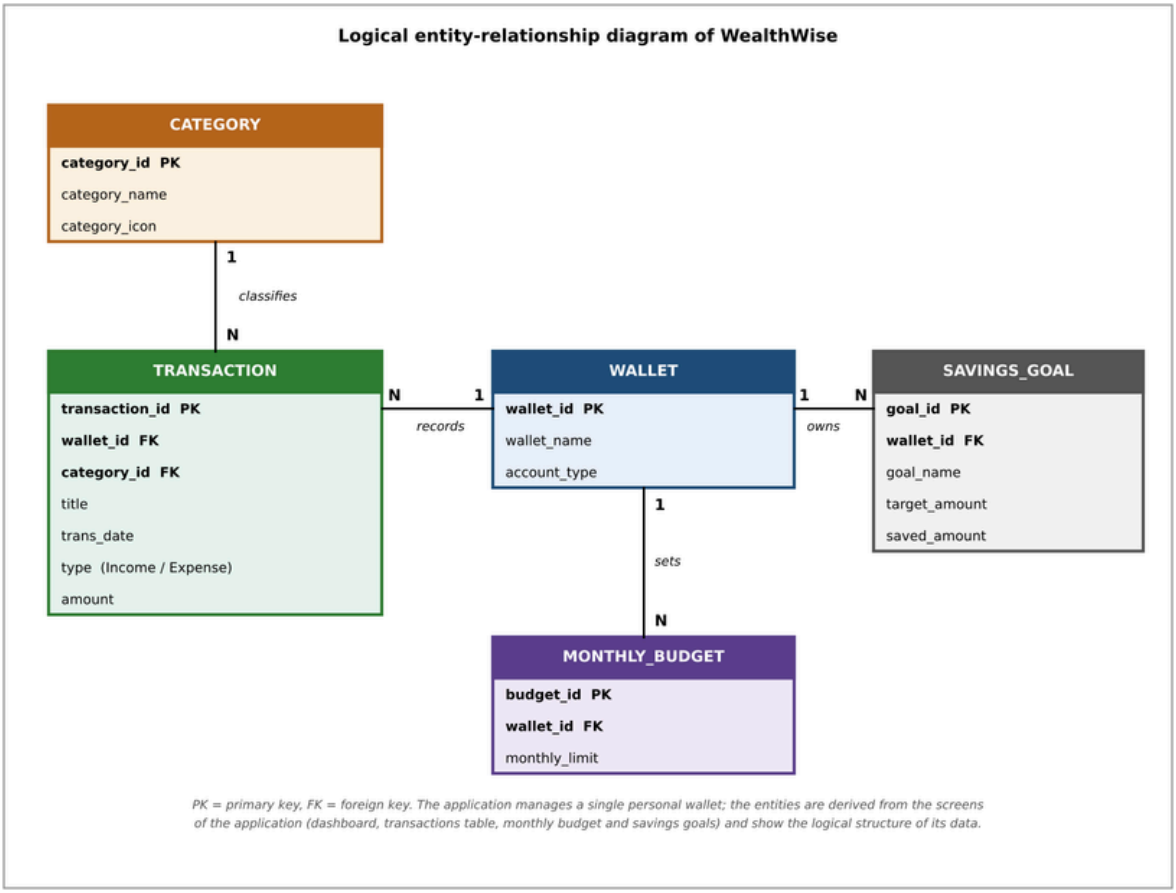

Fig 2.2 Entity-relationship diagram of WealthWise

One wallet records manytransactions,setsmonthlybudgetsandownssavingsgoals;each transaction belongs to one category.

2.3 DATA FLOW DIAGRAM

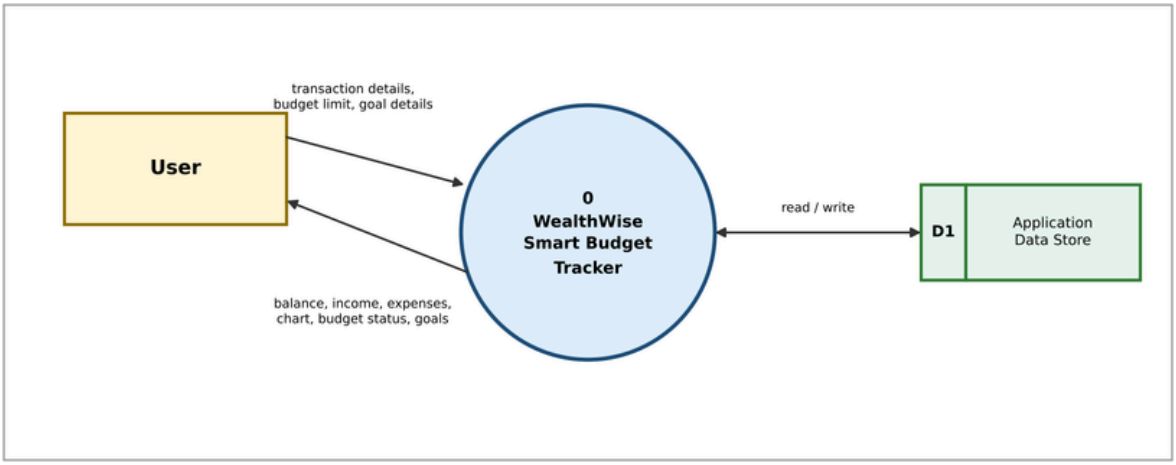

Fig 2.3(a) Level 0 data flow diagram

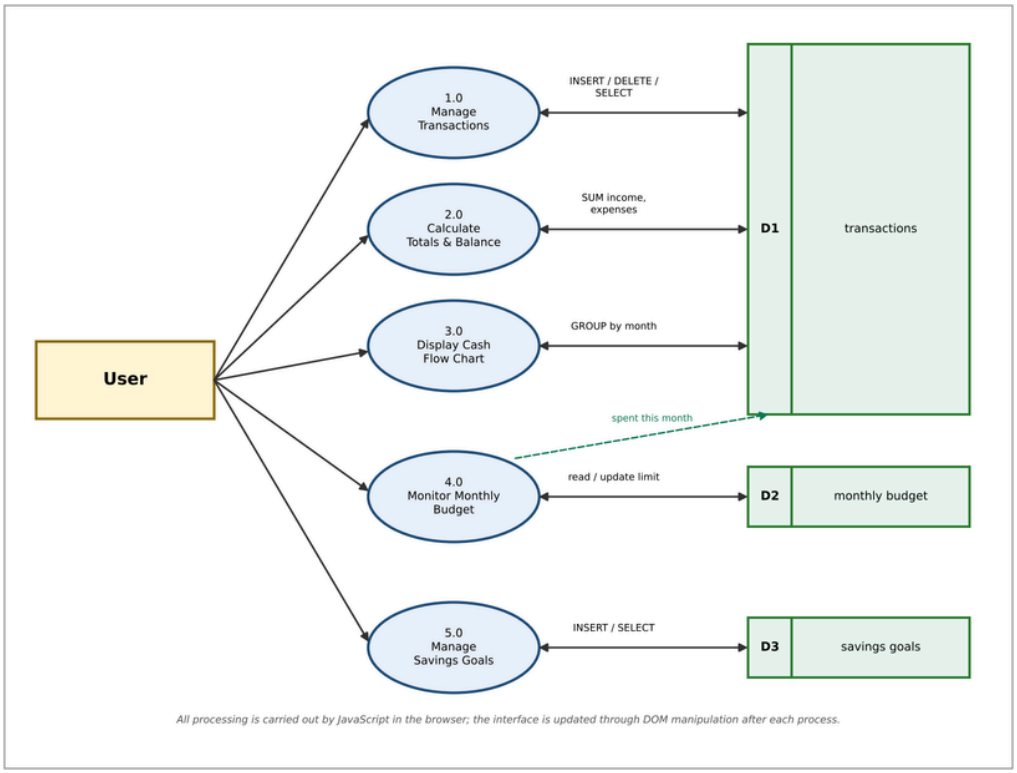

Fig 2.3(b) Level 1 data flow diagram

All processing is performed by JavaScriptinthebrowserandthepageisupdated through DOM manipulation.

3. MODULE DESCRIPTION

- **Dashboard Summary Module:** calculates and displays the total balance, total income and total expenses in the three summary cards at the top of the page.
- **Transaction Module:** adds new transactions through the Add transaction button, lists them in the recent transactions table with category, date, type and amount, applies the transaction filter and deletes entries.
- **Cash Flow Chart Module:** groups the transactions by month and draws income and expenses bars with a legend.
- **Monthly Budget Module:** compares the spending of the month with the monthly limit, fills the progress bar, shows the percentage used and the over-budget amount, and updates the limit.
- **Savings Goals Module:** creates savings goals and shows an empty-state message when there are none.
- **Navigation and Interface Module:** sidebar navigation, header, Add transaction button, wallet label, motivational card and footer.

Technologies used and where

Technology	Where it is used	Purpose
HTML5	Page markup of the dashboard	Structure of the sidebar, summary cards, chart card, budget card, savings goals card, table and forms
CSS3	Style sheet of the application	Green colour theme, rounded cards, layout, progress bar, category and type tags, chart bars
JavaScript	Script of the application	Event handling, calculation of totals and budget percentage, filtering, data handling
DOM manipulation	JavaScript code that edits the page	Updating cards, table rows, chart and budget bar without leaving the page

4. IMPLEMENTATION - 4.1 SCREENSHOTS

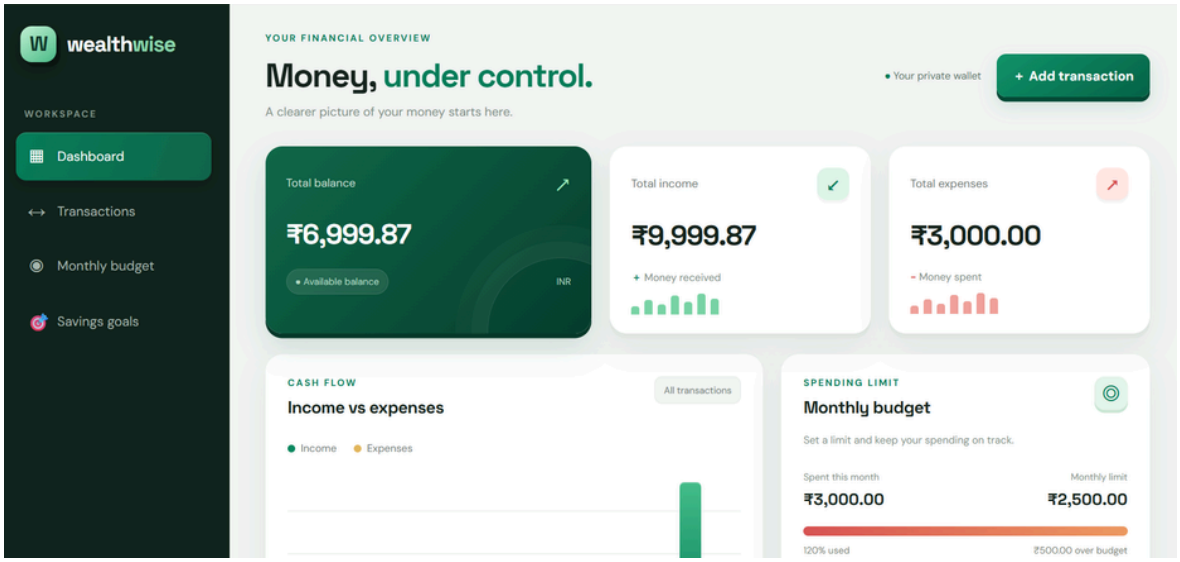

Fig 4.1 Dashboard overview

Sidebar navigation, total balance ₹6,999.87,total income ₹9,999.87 and total expenses ₹3,000.00, the Add transaction button and the start of the cash flow and monthly budget cards.

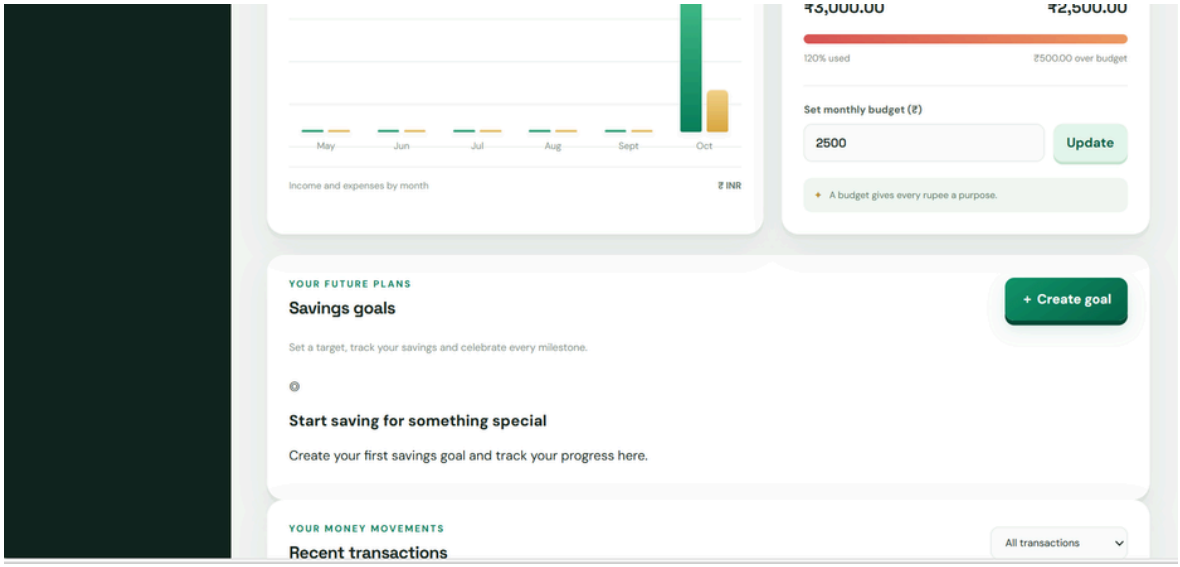

Fig 4.2 Cash flow chart, monthly budget and savings goals

Income and expensesbymonth (Mayto Oct),themonthlybudgetof ₹2,500 withthe Update button, 120% used and ₹500.00 over budget, and the Savings goals section with the Create goal button.

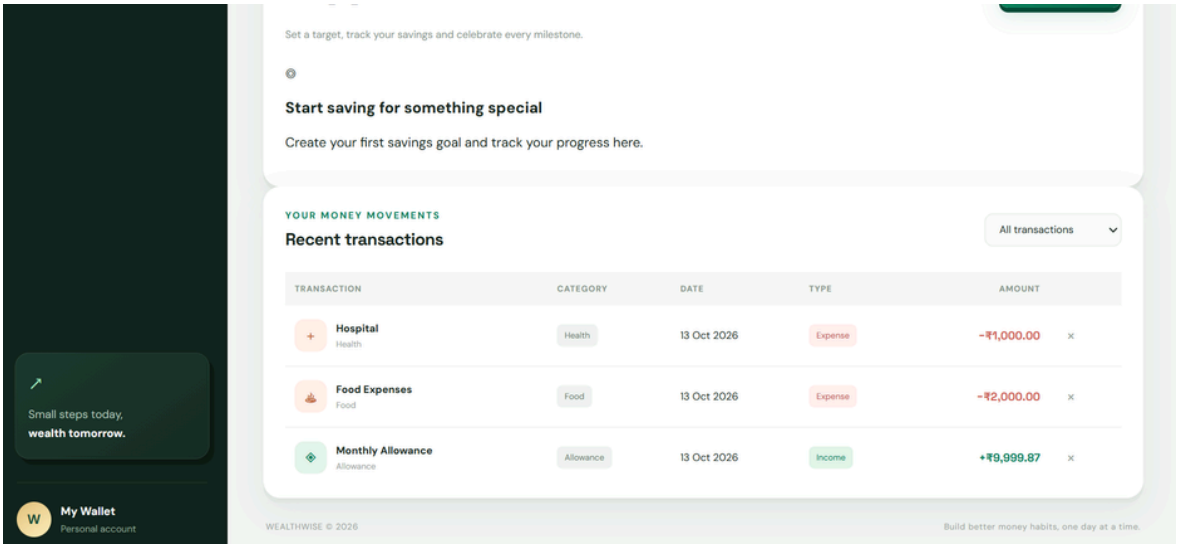

Fig 4.3 Savings goals and recent transactions

The empty savings goals messageandtherecent transactions table with Hospital (Health), Food Expenses (Food) and Monthly Allowance (Allowance), all dated 13 Oct 2026, with the filter and delete controls and the "My Wallet" label.

Table 4.1 Interface components visible in the screenshots

Component	Details shown in the application
Summary cards	Total balance (Available balance, INR), Total income (Money received), Total expenses (Money spent)
Cash flow chart	Income vs expenses, legend, months May to Oct, "Income and expenses by month", ₹ INR
Monthly budget	Spent this month, Monthly limit, progress bar, 120% used, ₹500.00 over budget, Set monthly budget (₹) field and Update button
Savings goals	Create goal button; empty-state text "Start saving for something special"
Recent transactions	Columns Transaction, Category, Date, Type, Amount; "All transactions" selector; × delete control on each row
Sidebar	Dashboard, Transactions, Monthly budget, Savings goals, motivational card, My Wallet (Personal account)

4.2 DATABASE DESIGN

WealthWise is a front-end application built with HTML, CSS and JavaScript and does not use a server-side database. Its data is handled in the browser by JavaScript. The logical data model below, derived from the screens of the application (Fig 2.2), describes the data the application works with: one wallet, the categorised transactions recorded in it, the monthly budget limit and the savings goals.

Entity	Important attributes	Purpose
WALLET	wallet_id PK, wallet_name, account_type	The single personal wallet ("My Wallet – Personal account")
CATEGORY	category_id PK, category_name, category_icon	Groups transactions, for example Health, Food and Allowance
TRANSACTION	transaction_id PK, wallet_id FK, category_id FK, title, trans_date, type, amount	Every income or expense entry shown in the recent transactions table
MONTHLY_BUDGET	budget_id PK, wallet_id FK, monthly_limit	The spending limit used by the Monthly budget card
SAVINGS_GOAL	goal_id PK, wallet_id FK, goal_name, target_amount, saved_amount	Savings goals created by the user and their progress

Note: no savings goal had been created in the screenshots, so the goal attributes are the logical ones implied by "Set a target, track your savings". The relationships are: one wallet records many transactions, sets monthly budgets and owns savings goals, and one category classifies many transactions.

4.3 IMPLEMENTATION DETAILS

1. Page structure (HTML)

The page is divided into a dark sidebar and a main area. The main area contains the header with the Add transaction button, three summary cards, the cash flow chart card, the monthly budget card, the savings goals card, the recent transactions table and a footer.

2. Styling (CSS)

CSS gives the application its dark-green and white card design, rounded corners, shadows, category and type tags, and colour-coded amounts: green with a plus sign for income and red with a minus sign for expenses. The monthly budget bar is a coloured progress bar, and the chart bars use green for income and amber for expenses.

3. Logic and DOM manipulation (JavaScript)

JavaScript responds to the user's actions: adding a transaction, deleting a row, changing the transaction filter, updating the monthly budget and creating a savings goal. After each action it recalculates the totals and budget usage and uses DOM manipulation to write the new values into the summary cards, rebuild the transaction table rows, update the budget bar and redraw the chart bars.

4. Calculations shown in the application

The values below are the figures visible in Fig 4.1 to Fig 4.3 and show how the dashboard derives its numbers.

Value	How it is obtained	Result
Total income	Sum of income transactions (Monthly Allowance)	₹9,999.8
Total	Hospital ₹1,000.00 + Food Expenses ₹2,000.00	7
expenses	Total income – total expenses = 9,999.87 – 3,000.00	₹3,000.0
Total balance	Spent ÷ monthly limit × 100 = 3,000 ÷ 2,500 × 100	0
Budget used	Spent – monthly limit = 3,000 – 2,500	₹6,999.8

5. CONCLUSION

WealthWise – Smart Budget Tracker brings the scattered activity of personal money management into one organised web application. The user can see the total balance, income and expenses at a glance, follow monthly cash flow in a chart, record categorised transactions, keep spending within a monthly budget and plan savings goals. The project gave me practical experience in structuring a web page with HTML, designing a consistent interface with CSS, writing application logic in JavaScript and updating the page through DOM manipulation.

Future improvements include user login with secure storage in a database, editing of transactions, category-wise charts and reports, savings goal deadlines with progress indicators, alerts when the budget is exceeded, export of data to PDF or Excel, support for multiple wallets and a mobile application.
